Subject: Three week update 7-6-16

On July 06, 2016 the DEQ received the most recent update from Carl Burnham of IRS Environmental regarding the quantity of Asbestos material removed from the CFAC site to date. A current cumulative total of 35,080 pounds of regulated asbestos waste has been removed from the facility. The waste disposal receipts for June indicate the removal of an additional 19,420 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 769,510 pounds. Structures included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, Compressor Building, and Laboratory.

An asbestos project permit is in place through 2016 for the East Rectifier building, through July for the Laboratory Building, and through October for the building 1 complex. Demolition notifications remain in place for the East and West Rectifiers, Rod Mill Building, Laboratory Building and Building 1 complex.
